

ASPHALT PRIMER

Potmix® Asphalt Primer is a bonding agent used to increase the adhesiveness between asphalt layers and provide sealing between asphalt joints. Asphalt Primer is ideal when laying new asphalt on top of old worn-out surfaces or around edges of cut asphalt areas.

- BITUMINOUS BONDING AGENT
- WITH OR WITHOUT SOLVENTS

Instruction of use: clean the surface from excess dirt and dust. Apply the primer by spraying/pouring it from a distance of 10-20 cm. Let the primer set for 10-20 minutes for optimal adhesiveness. The area can be dusted with sand after application to avoid bitumen stains on vehicle tires or pedestrians.
